Written Narrative of the EMS Run

On May 07, 2014 Bradley County EMS responded to a 2 car crash with multiple patients. One car was off of the roadway in a deep drainage ditch. The vehicle had heavy damage and appeared to have rolled over during the crash. As responders assessed the scene they found a 14 year old male patient unresponsive in the rear floorboard heavily entrapped and he was unreachable. The patient had obvious agonal respirations, and when EMS personnel were able to get to him, he had a rapid and bounding radial pulse.

Once the patient was freed from the wreckage he was immobilized and moved quickly to the ambulance. EMS began assisted ventilations with a bag valve mask. The trauma assessment was continued. A hematoma was noted to the forehead and swelling to the left elbow. The patient had an initial O2 saturation of 61% prior to airway intervention. As assessment and treatment was continued the patient was noted to have some posturing type activity. Bilateral IV lines were established. Patient's airway was secured by rapid sequence intubation.

Erlanger's Lifeforce had been requested to respond for transport. After a successful intubation EMS transported patient to the Landing Zone. A thorough report was given to the air medical crew. Patient was flown to Erlanger Medical Center in Chattanooga.

After his treatment at Erlanger, Quantavius went to the Shepard Center in Atlanta for rehab. He was able to go home at the end of June. He recently got cleared to play basketball again for his school. As soon as the coach put him in the game for the first time since the accident he shot a 3 pointer! He has come a long way and is doing well.

Why These Nominees Deserve This Award

These nominees are deserving of this award because of their continued dedication and service. This particular incident was a multi-unit response with multiple patients. These EMS crew members and all agencies involved did an outstanding job in their response and patient care. It is great to see how well the system works all the way from the initial call to 911, to the EMS response, to the transition from EMS to air medical. When all the pieces come together, like in this situation, recognition of all the players is key.

Emergency response can be somewhat stressful on a normal day. A call like this one that involves someone's child expounds the stress because most of our guys have children of their own. Thankfully, this child survived and his parents got to have their son back. These responders should be recognized for their efforts and professionalism for being a part of such a miraculous event.

Narrative

EMS RESPONDED IMMEDIATELY TO THE SCENE OF A MOTOR VEHICLE COLLISION ON THE ROADWAY. UPON ARRIVAL EMS MADE THE WAY TO A VEHICLE THAT WAS OFF THE ROADWAY AND IN A DITCH, THE VEHICLE HAD HEAVY DAMAGE AND APPEARED TO HAVE ROLLED OVER DURING THE CRASH. EMS FOUND THE PT IN THE VEHICLE HEAVILY ENTRAPPED, THE PT WAS UNRESPONSIVE IN THE REAR FLOORBOARD, AND WAS UNREACHABLE. THE PT WAS UNRESTRAINED AND THERE IS EVIDENCE THAT THE PT MAY HAVE STRUCK THE WINDSHIELD. IT WAS OBVIOUS THAT THE PT HAD AGONAL RESPIRATIONS AT A RATE AROUND 6-10 BREATHS PER MINUTE, AND EMS WAS ABLE TO REACH THE PT ARM AND HE HAD A TACHYCARDIAC AND BOUNDING RADIAL PULSE. IT WAS APPROXIMATELY 10-12 MINUTES ONCE ON SCENE UNTIL THE PT WAS ABLE TO BE REMOVED FROM THE VEHICLE. EMS PLACED A C-COLLAR ON THE PT AND PLACED THE PT ON A SPINE BOARD, THE PT WAS MOVED INTO THE AMBULANCE. PT HAD NO FORM OF IDENTIFICATION AND THERE WAS NOBODY PRESENT ON SCENE TO IDENTIFY THE PT, HIS AGE, HISTORY, AND ALLERGIES WAS UNKNOWN AT THE TIME OF TREATMENT. EMS BEGAN ASSISTED VENTILATIONS AND BEGAN A TRAUMA ASSESSMENT ON THE PT, EMS NOTED A HEMATOMA (NO CREPITUS NOTED) TO THE FOREHEAD AND SWELLING TO THE LEFT ELBOW. THE PT HAD A ROOM AIR SATURATION OF 61% PRIOR TO AIRWAY INTERVENTION, IT WAS APPARENT THE PT HAD ASPIRATED AND HAD POOR EXCHANGE WHILE ENTRAPPED. EMS MONITORED THE PT'S VITALS THROUGHOUT ENCOUNTER AND HE WAS SINUS TACHYCARDIA ON THE MONITOR. THE PT HAD NO DEFORMITY TO THE SPINE AND THE ABDOMEN WAS NO BRUISED AND TENDER. THE PT HAD POSTURING TYPE MOTOR SENSATIONS. BILATERAL IV LINES WERE ESTABLISHED WITH AN 18G IN THE LEFT FOREARM AND A 16G IN THE RIGHT AC, THE PT GOT A 350ML LR BOLUS. EMS PREPARED FOR FACILITATED INDUCTION IN ORDER TO CONTROL THE PT'S AIRWAY AND GAVE TO SEQUENCE OF MEDICATIONS IN ACCORDANCE WITH PROTOCOL. EMS INTUBATED THE PT WITH A 7.5 ET TUBE AT 22CM AT THE LIPS, PLACEMENT WAS CONFIRMED WITH FOGGING OF THE TUBE, VISUALIZATION OF CORDS,

PCR: 14-8389-507 Date: 05/07/2014 Shift: B Unit: 060148 Callsign: 504 Station: FHS Wksld: 1
 MCN: Name: COBB, QUANTAVIUS

AND COLORIMETRIC CO2 CONFIRMATION. THE TUBE WAS HELD IN PLACE WITH A BITE GUARD. SHORTLY AFTER SUCCESSFUL INTUBATION EMS TRANSPORTED THE PT TO THE LANDING ZONE WHERE LIFEFORCE WAS STANDING BY FOR RAPID TRANSPORT OF THE PT TO ERLANGER. UPON SECONDARY TRAUMA ASSESSMENT EMS DID NOT FIND ANY OTHER INDICATION OF INJURIES. THE PT'S PUPILS WERE SLUGGISH. EMS TRACHEAL SUCTIONED THE PT'S AIRWAY IN ORDER TO CLEAR HEAVY CONGESTION OF BLOOD AND ASPIRATION THAT WAS PRESENT. EMS ADMINISTERED VERSED AND NORCURON FOR CONTINUES SEDATION PRIOR TO TRANSFERRING CARE TO LIFEFORCE STAFF. LIFEFORCE CREW ASSESSED THE PT AND EMS GAVE THEM A THROUGH REPORT, THERE WERE NO NOTED CHANGES IN THE PT'S CONDITION OR VITAL SIGNS AT TIME OF TRANSFER. LIFEFORCE STAFF TOOK CARE OF PT AT 2148 AND PT WAS LEFT IN THEIR CARE.

History of Present Illness/Injury

Called to the scene by Bradley County EMS Luke Fisher EMT-P. EMS reports pt to be an unrestrained passenger of a vehicle that rear ended another vehicle and then rolled over. EMS reports significant intrusion and vehicle damage. Prolonged extrication. EMS reports positive LOC upon arrival and agonal respirations. Per EMS pt was unconscious, minimal respiratory effort, signs of aspiration noted, palpable pulses, soft, flat abdomen, deformity to left upper extremity, forehead hematoma, and multiple abrasions and lacerations to forehead, left cheek, bilateral upper extremities, and bilateral lower extremities. EMS also elected to RSI pt for oxygenation and ventilation needs as well as airway control. No reports of seizures, hypertension, or hypotension noted. EMS unable to get pt history. Air transport was requested for rapid transport to level one trauma center for trauma surgeon and neurosurgeon capabilities.

Ventilation

Time	05/07 21:45 EDT	05/07 21:50 EDT	05/07 21:55 EDT	05/07 22:00 EDT	05/07 22:05 EDT	05/07 22:10 EDT	05/07 22:15 EDT
Ventilation	Bagged						

Oxygen Therapy

May 07, 2014 21:30:00 EDT	Performed by: EMS Provider. Locale: Prior to Arrival. Delivery device: Bag valve mask. Indication(s): Hypoxia, Per Protocol. Flow Rate: 15 lpm. Comments: Per EMS pt had agonal respirations upon contact with o2 sat in 60s. EMS began to ventilate pt utilizing BVM on 100% FIO2 at an age appropriate rate. RSI complete. Pt continued to be ventilated utilizing BVT. No need for further intervention during transport.

Event Log

Time	Details
05/07 21:34 EDT	Ambulance Intercept - Point of P/U (Wheels moved w/pt on board to aircraft) Landed at designated LZ without incident. Upon arrival awaited EMS unit to arrive from the scene of the accident with the pt. EMS arrival with pt was at 2141. Crew and equipment to EMS unit. Pt contact was made in back of Bradley Co. EMS unit. Report obtained by Heather Wilson RN and assessment complete as noted per Seth Gentry. Pt. found to be orally intubated with size 7.5mm tube at a depth of 22cm at the lips and secured with commercial tube device. The pilot balloon was inflated. Tube placement verified with equal chest rise, bilateral breath sounds in all lobes, no sound over epigastrium when ventilated, condensation in the tube on exhalation, and positive color change on ETCO2 detector. Pt OETT suctioned per BCEMS with bloody, brown return of secretions. MRX modules attached, pt manually assisted with BVM at an age appropriate rate on portable O2. Pt. clothing cut off and covered with additional blankets to maintain temperature and privacy.
05/07 21:52 EDT	Other: Pt moved to LifeForce aircraft stretcher while maintaining full spinal immobilization and secured. Loaded into aircraft hot and secured to mainframe. OETT checked without any significant changes in assessment.
05/07 21:58 EDT	Other: Lift off to Erlanger Medical Center. Full spinal immobilization maintained. O2 therapy continued 15LPM via assisted ventilations with BVM. MRX monitor modules attached and functioning appropriately. IV bag hung in aircraft at WO. Pt connected to ETCO2 monitor with good waveform and numeric reading. Peep valve attached to BVM at 5cm H2O. IV bag#2 of 1000ml NS hung. Left femoral arterial stick performed as documented for stat analysis. 16F OGT placed as documented.
05/07 22:05 EDT	Patient Condition Update Pt continues to be monitored and ventilations assisted. Pt remains unresponsive with eyes closed, equal chest rise, ventilating with ease when assisted, good Spo2 and ETCO2 waveforms, IVs continue to flow without difficulty, pulses strong, and abdomen remains soft. No obvious changes in assessment noted. Radio contact made and report given.
05/07 22:10 EDT	Other: Landed at EHS helipad without incident and pt off loaded cold utilizing full spinal precautions. ETT placement confirmed again without any changes. Bilateral breath sounds remain equal throughout. Absent sounds over epigastrium. Pt transported to ED on portable O2 while being assisted with ventilations via BVM, MRX monitor attached, with IVF infusing without difficulty. To room #8 as directed by ED staff.
05/07 22:16 EDT	Other: Placed on ED stretcher utilizing full spinal precautions. Tube placement confirmed by ED receiving staff with no changes. Pt remains chemically sedated and paralyzed, no spontaneous breaths noted, ventilating with ease when assisted, equal chest rise, palpable pulses, and soft non distended abdomen. Report given to ED staff, questions answered, and care relinquished.
