

## EMS Star of Life NOMINATION FORM

**\*\*ALL FIELDS REQUIRED-use additional paper if necessary**

EMS Region #: 5

Patient's Name: David Christopher Brown

Patient's Diagnosis: Cardiac Arrest

Submitted by Name: Shannon Lankford Title: EMS Training Officer

EMS Agency: Williamson Medical Center EMS

Address: 4321 Carothers Pkwy.

City, State & Zip: Franklin, TN 37067

Phone: (615) 435-5597 Fax: (615) 435-5599 Email: slankford@wmed.org

### Please list all other AGENCIES associated with this team and their contact information:

*(For example if your had air medical assist, list the agency name, person to contact, and their complete contact information)*

Agency: Williamson County Rescue Squad

Name of Contact: Eddie House

Address: 508 W. Main St.

City, State & Zip: Franklin, TN 37064

Phone: (615) 405-3349 Fax: ( ) Email: Cell

Members on Call: Tom LoSchiavo, Alex Shriner, Barry Burris, J. Will Pewitt, Don Sowers

Email: brown.dchristopher@gmail.com

**\*\*Please ensure you fill out the Patient Consent Form that is attached.**

Date of Incident: 4/18/14

Place of Incident: Franklin, Tennessee

Please provide a written narrative of the EMS run below, and attach a copy of the all EMS run sheets, aeromedical run sheets, and emergency department notes. Please include any news articles and photos. Use additional paper as necessary.

WMC EMS Medic 22 was dispatched to a cardiac arrest. Upon their arrival, the crew found an unresponsive, pulseless, and apneic, 27 year old male lying supine on the ground outside with his grandfather rubbing his head with a paper towel. The patient is purple from the neck up, his skin is cool to the touch. The patient's grandfather stated that the patient was working on the barn and collapsed. EMS started CPR. Patient's skin color improved immediately. Cardiac monitor applied and showed ventricular fibrillation. Patient defibrillated twice, as well as given Epinephrine. Patient's cardiac rhythm changed to PEA. CPR continued, and after 2 minutes, patient is found to have carotid and radial pulses. While securing the patient for transport, patient began to have spontaneous respirations. Therapeutic hypothermia treatment was initiated, as well as an Amiodarone drip.

Please explain why you think the EMS Star of Life Award should be given to the nominees:

This 27 year old patient had no cardiac history, or any medical history that would indicate he would go into cardiac arrest. The actions of the EMS crew and Emergency Medical Responders contributed to his full recovery.

Permission is hereby granted to Tennessee Emergency Medical Services for Children Foundation (TN EMSC) to utilize the information contained in the EMS run report for my care that occurred on the 18 day of April (month), 2014 (year), in Franklin, Tennessee.

I understand that the EMS run report contains personal medical information that may, under state and federal laws, be considered confidential, and I hereby expressly waive my right to maintain the confidentiality of this medical information, so that the information in the EMS run report may be used by Tennessee Emergency Medical Services for Children Foundation in connection with the EMS Star of Life Award Ceremony. This release and waiver includes the potential publication of the information on television, radio and print media.

I also expressly waive any and all claims that I might have against the EMS service that prepared the EMS run report and/or against Tennessee Emergency Medical Services for Children Foundation, in connection with the use of this information for the EMS Star of Life Award Ceremony.

Initial Assessment			
Category	Comments	Abnormalities	
Mental Status	Patient is unresponsive.	Mental Status	<input checked="" type="checkbox"/> Unresponsive <input type="checkbox"/> Combative, Confused, Event Oriented, Hallucinations, Other, Place Oriented, Time Oriented
Skin	Patient is cyanotic from the neck up. Patient's trunk and extremities are pale and cool to the touch.	Skin	<input checked="" type="checkbox"/> Cyanotic, Pale <input type="checkbox"/> Cold, Diaphoresis, Hot, Jaundiced, Lividity, Mottled, Other
HEENT	Pupils are dilated and non reactive.	Head/Face	<input type="checkbox"/> Drainage, Facial Droop, Mass, Other, Swelling
		Eyes	<input checked="" type="checkbox"/> Left Pupil: 7-mm, Left: Dilated, Right Pupil: 7-mm, Right: Dilated
		Neck	<input type="checkbox"/> JVD, Other, Stridor, SubQ Air, Tracheal Deviation
Chest	Patient is not breathing. No Trauma observed to the chest.	Chest	<input type="checkbox"/> Accessory Muscle, Retractions
		Heart Sounds	Not Assessed
		Lung Sounds	<input checked="" type="checkbox"/> LL: Absent, LU: Absent, RL: Absent, RU: Absent
Abdomen	No trauma noted to the Abdomen.	General	<input type="checkbox"/> Diarrhea, Nausea, Other, Vomiting
		Left Upper	<input type="checkbox"/> Distension, Guarding, Mass, Other, Tenderness
		Right Upper	<input type="checkbox"/> Distension, Guarding, Mass, Other, Tenderness
		Left Lower	<input type="checkbox"/> Distension, Guarding, Mass, Other, Tenderness
		Right Lower	<input type="checkbox"/> Distension, Guarding, Mass, Other, Tenderness
Back	No Trauma observed to the back.	Cervical	<input type="checkbox"/> Deformity, Other, Pain on ROM, Scoliosis, Tender Paraspinous, Tender Spinous
		Thoracic	<input type="checkbox"/> Deformity, Other, Pain on ROM, Scoliosis, Tender Paraspinous, Tender Spinous
		Lumbar/Sacral	<input type="checkbox"/> Deformity, Other, Pain on ROM, Scoliosis, Tender Paraspinous, Tender Spinous
Pelvis/GU/GI	Patient did appear to have some urinary incontinence observed upon our arrival.	Pelvis/GU/GI	<input checked="" type="checkbox"/> Incontinence <input type="checkbox"/> Genital Injury, Hematuria, Pelvis GU Other, Pelvis Other, Rectal Bleeding, Tenderness, Unstable
Extremities	Patient's extremities are pale and cool with no pulses present. No signs of trauma or track marks observed.	Left Arm	<input checked="" type="checkbox"/> Other <input type="checkbox"/> Abnormal Pulse, Abnormal Sensation, Edema, Paralysis, Weakness
		Right Arm	<input checked="" type="checkbox"/> Other <input type="checkbox"/> Abnormal Pulse, Abnormal Sensation, Edema, Paralysis, Weakness
		Left Leg	<input checked="" type="checkbox"/> Other <input type="checkbox"/> Abnormal Pulse, Abnormal Sensation, Edema, Paralysis, Weakness
		Right Leg	<input checked="" type="checkbox"/> Other <input type="checkbox"/> Abnormal Pulse, Abnormal Sensation, Edema, Paralysis, Weakness
		Pulse	<input checked="" type="checkbox"/> Carotid: Absent, Radial: Absent
		Capillary Refill	<input checked="" type="checkbox"/> Left Upper: > 5 Sec, Right Upper: > 5 Sec
		Neurological	Patient is unresponsive, pulse less, and not breathing.

Assessment Time: 04/18/2014 17:47

Ongoing Assessment

Category	Comments	Abnormalities	
Mental Status	Patient is still unresponsive but now has a pulse and has spontaneous respirations.	Mental Status	⊖ Combative, Confused, Event Oriented, Hallucinations, Other, Person Oriented, Place Oriented, Time Oriented, Unresponsive
Skin	Patient's skin is now pink, warm, and dry. Patient does have some redness around the neck.	Skin	⊖ Cold, Cyanotic, Diaphoresis, Hot, Jaundiced, Lividity, Mottled, Other, Pale
HEENT	Patient's pupils are now midpoint and reactive.	Head/Face	⊖ Drainage, Facial Droop, Mass, Other, Swelling
		Eyes	⊕ Left Pupil: 4-mm, Right Pupil: 4-mm ⊖ Left: Constricted, Left: Dilated, Left: Non-Responsive, Left: Other, Right: Constricted, Right: Dilated, Right: Non-Responsive, Right: Other
		Neck	⊖ JVD, Other, Stridor, SubQ Air, Tracheal Deviation
Chest	Patient has clear and equal breath sounds with BVM ventilations.	Chest	⊖ Accessory Muscle, Retractions
		Heart Sounds	Not Assessed
		Lung Sounds	⊕ LL: Clear, LU: Clear, RL: Clear, RU: Clear
Abdomen	Abdomen is soft non distended.	General	⊖ Diarrhea, Nausea, Other, Vomiting
		Left Upper	⊖ Distension, Guarding, Mass, Other, Tenderness
		Right Upper	⊖ Distension, Guarding, Mass, Other, Tenderness
		Left Lower	⊖ Distension, Guarding, Mass, Other, Tenderness
		Right Lower	⊖ Distension, Guarding, Mass, Other, Tenderness
Back		Cervical	No Abnormalities
		Thoracic	No Abnormalities
		Lumbar/Sacral	No Abnormalities
Pelvis/GU/GI		Pelvis/GU/GI	No Abnormalities
Extremities		Left Arm	⊖ Abnormal Pulse, Abnormal Sensation, Edema, Other, Paralysis, Weakness
		Right Arm	⊖ Abnormal Pulse, Abnormal Sensation, Edema, Other, Paralysis, Weakness
		Left Leg	⊖ Abnormal Pulse, Abnormal Sensation, Edema, Other, Paralysis, Weakness
		Right Leg	⊖ Abnormal Pulse, Abnormal Sensation, Edema, Other, Paralysis, Weakness
		Pulse	⊕ Carotid: 2+ Normal, Femoral: 2+ Normal, Radial: 2+ Normal
		Capillary Refill	⊕ Left Upper: < 2 Sec, Right Upper: < 2 Sec
Neurological	Patient is still unconscious with no purposeful movements.	Neurological	⊖ Facial Droop, Other, Seizures, Slurred Speech, Tremors, Weakness Left-Sided, Weakness Right-Sided

Assessment Time: 04/18/2014 18:15

Narrative

Dispatched to 1324 Old Hillsboro Road for a cardiac arrest. We arrived on the scene to find an unresponsive, pulse less, and apenic 27 y/o male who is lying supine on the ground just outside of a barn door with his Grandfather rubbing his head with a paper towel. The patient is purple from the neck up, his skin is cool to the touch, and he appears to have urinary incontinence. The patient's grandfather states that he was helping him work in the barn when he suddenly collapsed to the ground and would not respond to them so they called 911. We assessed for a pulse and breathing with neither found. We started CPR with chest compressions at a rate of 30:2. The patient's skin color began to improve immediately with chest compressions. We placed the combo pads on the patient, turned the monitor on which shows V-Fib, we shocked at 200 and resumed CPR. After 2 minutes of CPR we assessed for a pulse and rhythm. The patient is still in V-fib so we shocked at 300 and resumed CPR. Started an IO in the right tibia and administered 1 mg of EPI 1:10000 rapidly followed by 2 mg of Narcan. We placed a number 4 King airway and confirmed placement with ECO2, positive breath sounds, chest rise, and absent epigastric sounds. We assessed for a pulse and rhythm check with reveals a fast PEA. We resumed CPR and administered EPI 1:10000 rapidly and began to consider the H's and T's. Rechecked pulse after 2 minutes. The patient now has a strong carotid and radial pulse present and his ECO2 went up to 90 and then began to come back down. We assessed vitals, and secured him onto a LSB, The patient is now starting to have some spontaneous respirations. We placed him onto the cot and placed into the unit, We began cooling with ice packs and the patient began to have rapid spontaneous respirations and his ECO2 began to go down further into the 20's. I administered the patient Versed and Vecuronium and we were able to control his respirations with the king airway and a BVM maintaining an ECO2 around 38 to 40. We also started a 2nd IV in the right AC and administered the patient 150 mg Amiodarone in 100 ml of NS over 10 minutes. Did a 12-lead and faxed it to WMC ER. Contacted WMC ER and had them fax the 12-lead to Vanderbilt. We transported emergency to Vanderbilt. En route the patient's vitals remained stable. Verbal and written report given. Patient left in T3 without complications.
